

RELIABLE PUBLIC HEALTH SURVEILLANCE

M. Frisén

Göteborg University, Göteborg, Sweden

Email: *Marianne.Frisen@Statistics.gu.se*

Systems for spatial and syndromic surveillance are needed for early detection of bioterrorism, new infectious diseases and other serious health events. Timeliness, control of false alarms and robustness are important issues. Different ways to evaluate surveillance systems are demonstrated by freeware. Swedish data on infectious diseases will be used to illustrate methods.
