

Contents

1	'Knowing' in medicine	
	A heritage of authoritarianism. Growth of scepticism. Experimental methods in clinical study. The randomized clinical trial.	1
2	Framing the question	
	Genuine questions. Searching for questions. Data dredging procedures. Problems induced by variability. Numerical approach to variability. Meaningful questions.	14
3	Representative patients	
	Random sampling model. Groups of patients. Representation in focused trials. Eligibility and enrollment.	30
4	Controlled comparison	
	'Historical' controls. Randomized allotment. Allocation in pilot trials. Non-random assignment. Adaptive allocation procedures.	42
5	Intervention	
	Specified maneuvers. Evenhanded treatment. Use of placebos. Multiple interventions. Procedural biases.	57
6	Accurate observation	
	Physician as detective. Prophecy on trial. Measurement. Accuracy in measurement.	71
7	The event of interest	
	Surrogate outcome. Accounting of time-related events. Confirming criteria for outcomes. Target events.	86
8	Avoiding entrapment	
	Time-related traps. Inequalities in compared groups. Precautions in clinical trials.	100
9	The stopping rule	
	Size of a pilot trial. Size of a randomized trial. Practical aspects of trial size estimation. The multiple-look dilemma.	112

10 Inferential decision

Decisive amount of evidence. Selection of 'significance' test. Choosing a level of 'significance'. Concepts of statistical proof. 127

11 Extrapolation of trial results

Practical action in the face of uncertainty. Decision analysis. Wide-spread medical action. 139

12 The ethics of human experimentation

Reaction to exuberant treatment. Formal codes of medical ethics. Goals of human experimentation. Principles and rights. Patient risk in clinical trials. Recruitment of trial participants. Freely given informed consent. Public character of scientific medicine. 153

Appendix A The story of retrolental fibroplasia

A new disease. Descriptive studies. Early comparative trials. Supplemental oxygen. A pyrrhic victory. Determinative era of oxygen treatment. 173

Appendix B Checklist for randomized clinical trial design 180
